EXHIBIT "B"

ITEM #15

This temporary application to change the point of diversion of a portion of the waters heretofore appropriated under Permit 57374 is being filed by the Department of Energy in order to conduct aquifer characteristics studies as part of the site characterization program on the Yucca Mountain Project. Said studies will commence this summer and will consist of hydraulic and tracer tests to identify hydraulic connections and to obtain hydraulic characteristics and transport properties of flow pathways within the Yucca Mountain Project site.

Three (3) wells, known as the C-Well complex, will be used to conduct these tests. The length of this testing will be approximately a three year period, depending on the test results. At the present, it is impossible to predict the pumpage rates and duration however the plan calls for the initial tests to be limited to a few days. Large scale testing with diversion rates of approximately 200 gpm will not begin until the second year of this program.

The water pumped as a result of this test program will be placed into the existing distribution system and beneficially utilized for road and pad construction, tunnelling, dust suppression, scientific testing, culinary and other related site uses. Waters not used for these purposes shall be discharged into a spreading basin within 40 Mile Wash and used as a credit for aquifer recharge.

The total combined duty of this temporary change application and the two companion temporary change applications, along with the existing Permits 57373, 57374, 57375 & 57376 shall not exceed 430.19 acre-feet annually.

It is acknowledged that this temporary change application shall be subject to the terms and conditions set forth in Permits 57373, 57374, 57375 & 57376, to include compliance with the monitoring program entitled "Monitoring Program for the Groundwater Levels and Spring Flows in the Yucca Mountain Region of Southern Nevada and California, February, 1991, United States Department of Energy, Yucca Mountain Project Office."

This temporary change application is to expire upon the granting of a permanent right for this location or in one year, whichever occurs first.

For the proposed place of use, please refer to the map filed under Permit 57373.
